Safety Material

Safety Card No. 1
June 2014
Powered by: *NVDO*

ASBESTOS

Because of its excellent properties as a material, asbestos was widely used in buildings until the late twentieth century. In 1993, however, its use was prohibited in the Netherlands. Since then, no products containing asbestos have been manufactured. But the material can still be found in older buildings and systems. If it is damaged, exposed during renovation or demolition work or affected by fire, asbestos presents a serious danger to human health and the environment.

Work safely or don't work at all There are strict procedures when working on installations and systems. After all, there's a risk for noxious substances to be released. Therefore read the Permit to Work carefully and check if the described control measures have been taken.

Then take the precautionary measures which belong to your job. Always be alert to prevent highly concentrated noxious substances from being released. When in doubt: always ask or stop working!
