# Recommender System

- 1. Introduction
- Recommender System
- Plant Application
- Use Case
- Customer Benefits
- 2. Technology
- 3. Evaluation
- 4. Conclusion
- 5. Q&A

A **recommender system**, or a **recommendation system** (sometimes replacing 'system' with a synonym such as platform or engine), is a subclass of information filtering system that provide suggestions for items that are most pertinent to a particular user.

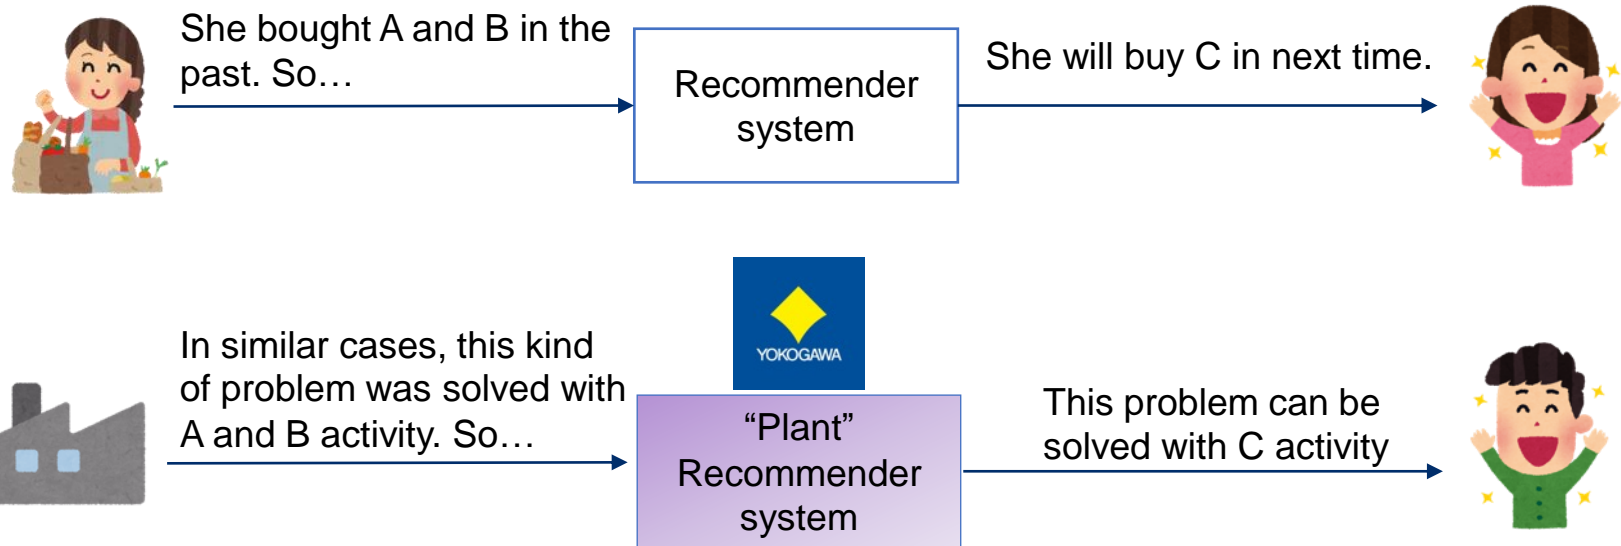

Wikipedia: [https://en.wikipedia.org/wiki/Recommender\\_system](https://en.wikipedia.org/wiki/Recommender_system)

# Plant Application

- 1. Introduction
  - Recommender System
  - **Plant Application**
  - Use Case
  - Customer Benefits
- 2. Technology
- 3. Evaluation
- 4. Conclusion
- 5. Q&A

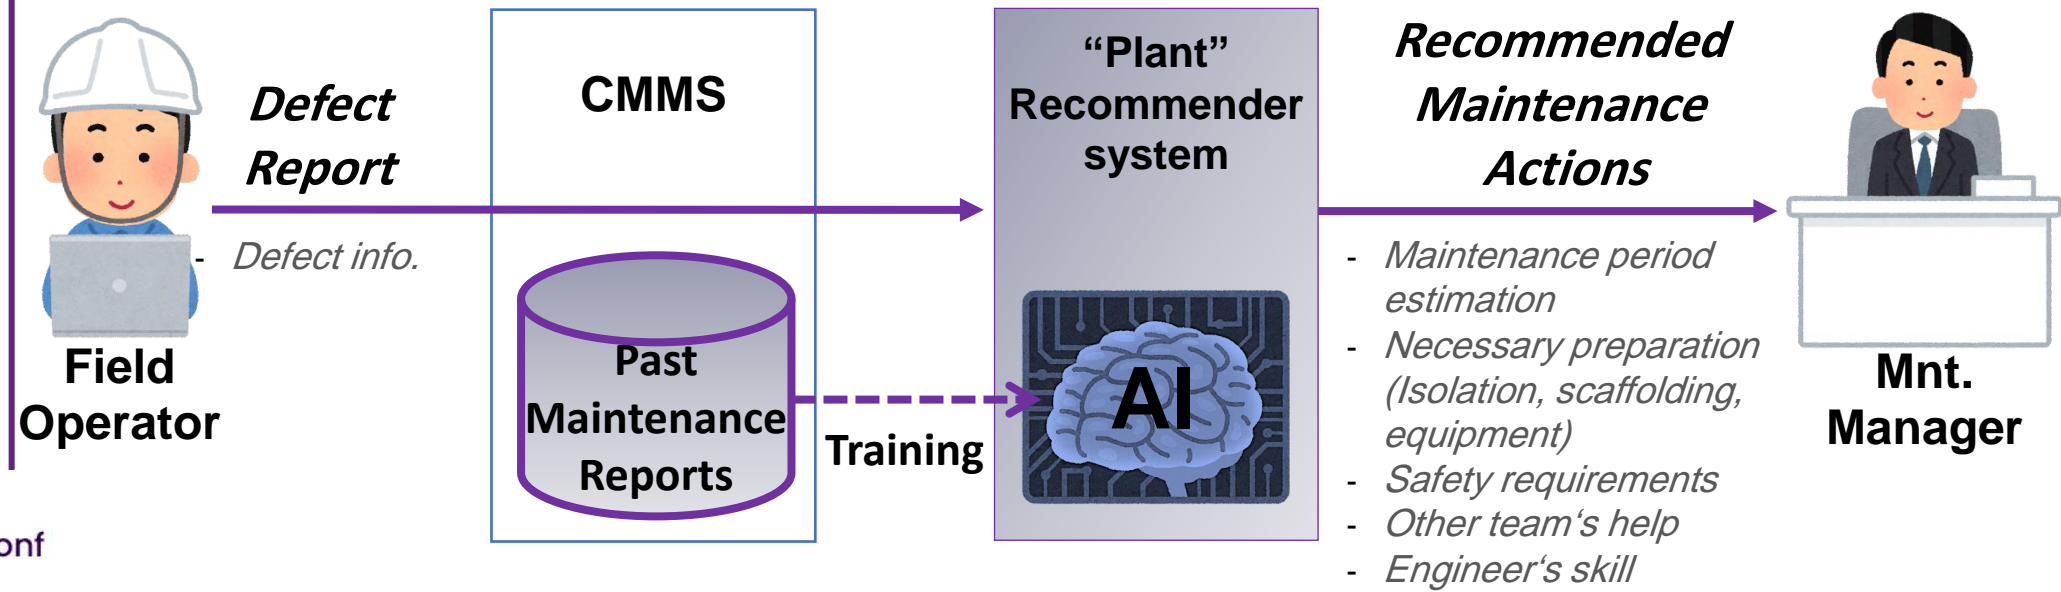

- Recommender system is usually used in e-commerce site, to suggest possible expected items for users.
- In plant, recommender system can be used for suggesting maintenance actions.

# Use case in plant

- 1. Introduction
  - Recommender System
  - Plant Application
- Use Case
- Customer Benefits
- 2. Technology
- 3. Evaluation
- 4. Conclusion
- 5. Q&A

- Plant Recommender system infers the defect situation, and suggests possible countermeasures, by referring to past maintenance reports
- The countermeasures are used for maintenance planning used by the maintenance manager and planner.

# Customer Benefits

- **1. Introduction**
- Recommender System
- Plant Application
- Use Case
- **Customer Benefits**
- 2. Technology
- 3. Evaluation
- 4. Conclusion
- 5. Q&A

## 1. Re-work avoidance

This tool will suggest maintenance plan based on past maintenance actions and avoid the re-work

## 2. Shorten planning time

The system can provide diverse solutions that will optimize maintenance work.

## 3. Effective knowledge transfer

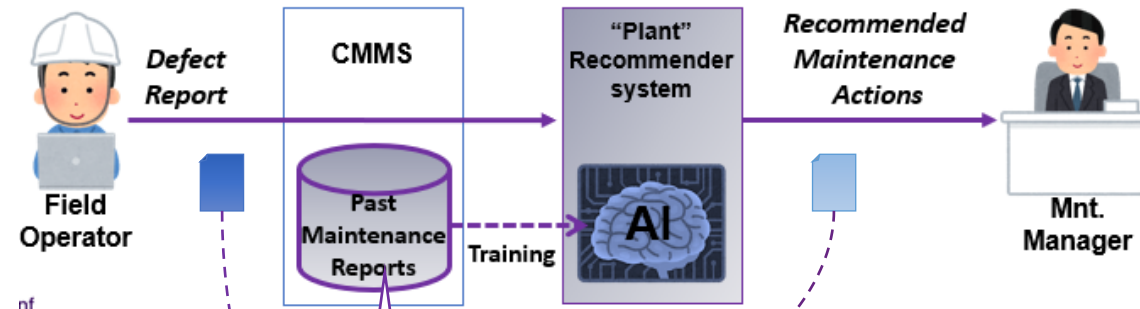

This engine can help to transfer the knowledge and experience from the expert maintenance engineer to the younger

# Data Structure

- 1. Introduction
- **2. Technology**
- **Data Structure**
- Mechanism
- 3. Evaluation
- 4. Conclusion
- 5. Q&A

## Maintenance Report = Defect Report + Maintenance Action

Data format of defect report (Input)

Input Variables	Type	Example
Position	Categorical	Area_1
Team		Team_1
Priority		Low
Problem	Text	Gas leak
Details		Gas leak in the area 1

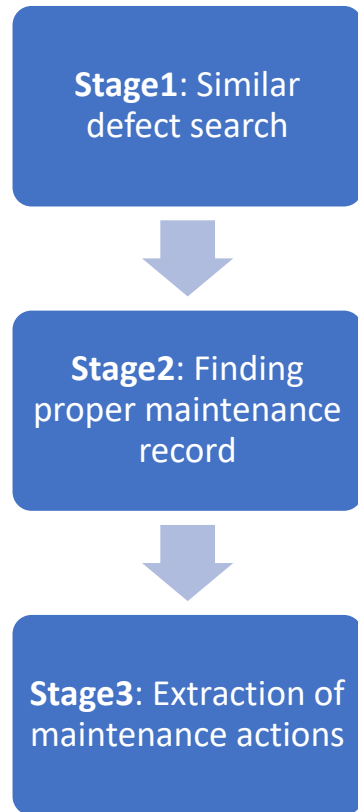

Data format of maintenance actions (Output)

output Variables	Example
Failure type	Leakage
Root cause	Aging
Solution	Modification and improvement
List of necessary preparation	Scaffolding required Containers required
Safety requirement	gas detector required
Staff required	5
Time required	6 hours

# Mechanism (1/4):

- 1. Introduction
- **2. Technology**
- Data Structure
- **Mechanism**
- 3. Evaluation
- 4. Conclusion
- 5. Q&A

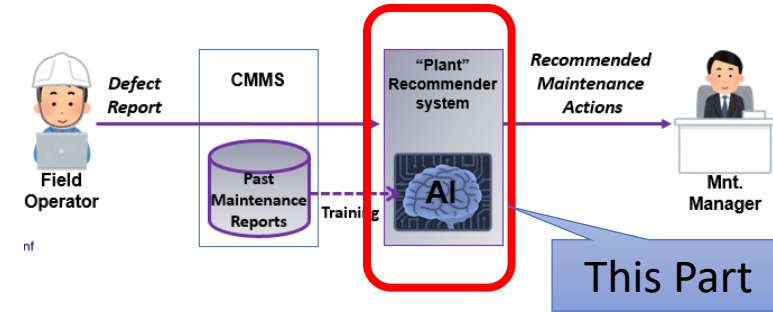

## Multi-stage Recommendation Overview

Finding similar defects to predict a proper failure from all of past defect reports.

Updating rating of maintenance records with the failure which picked up in the previous stage.

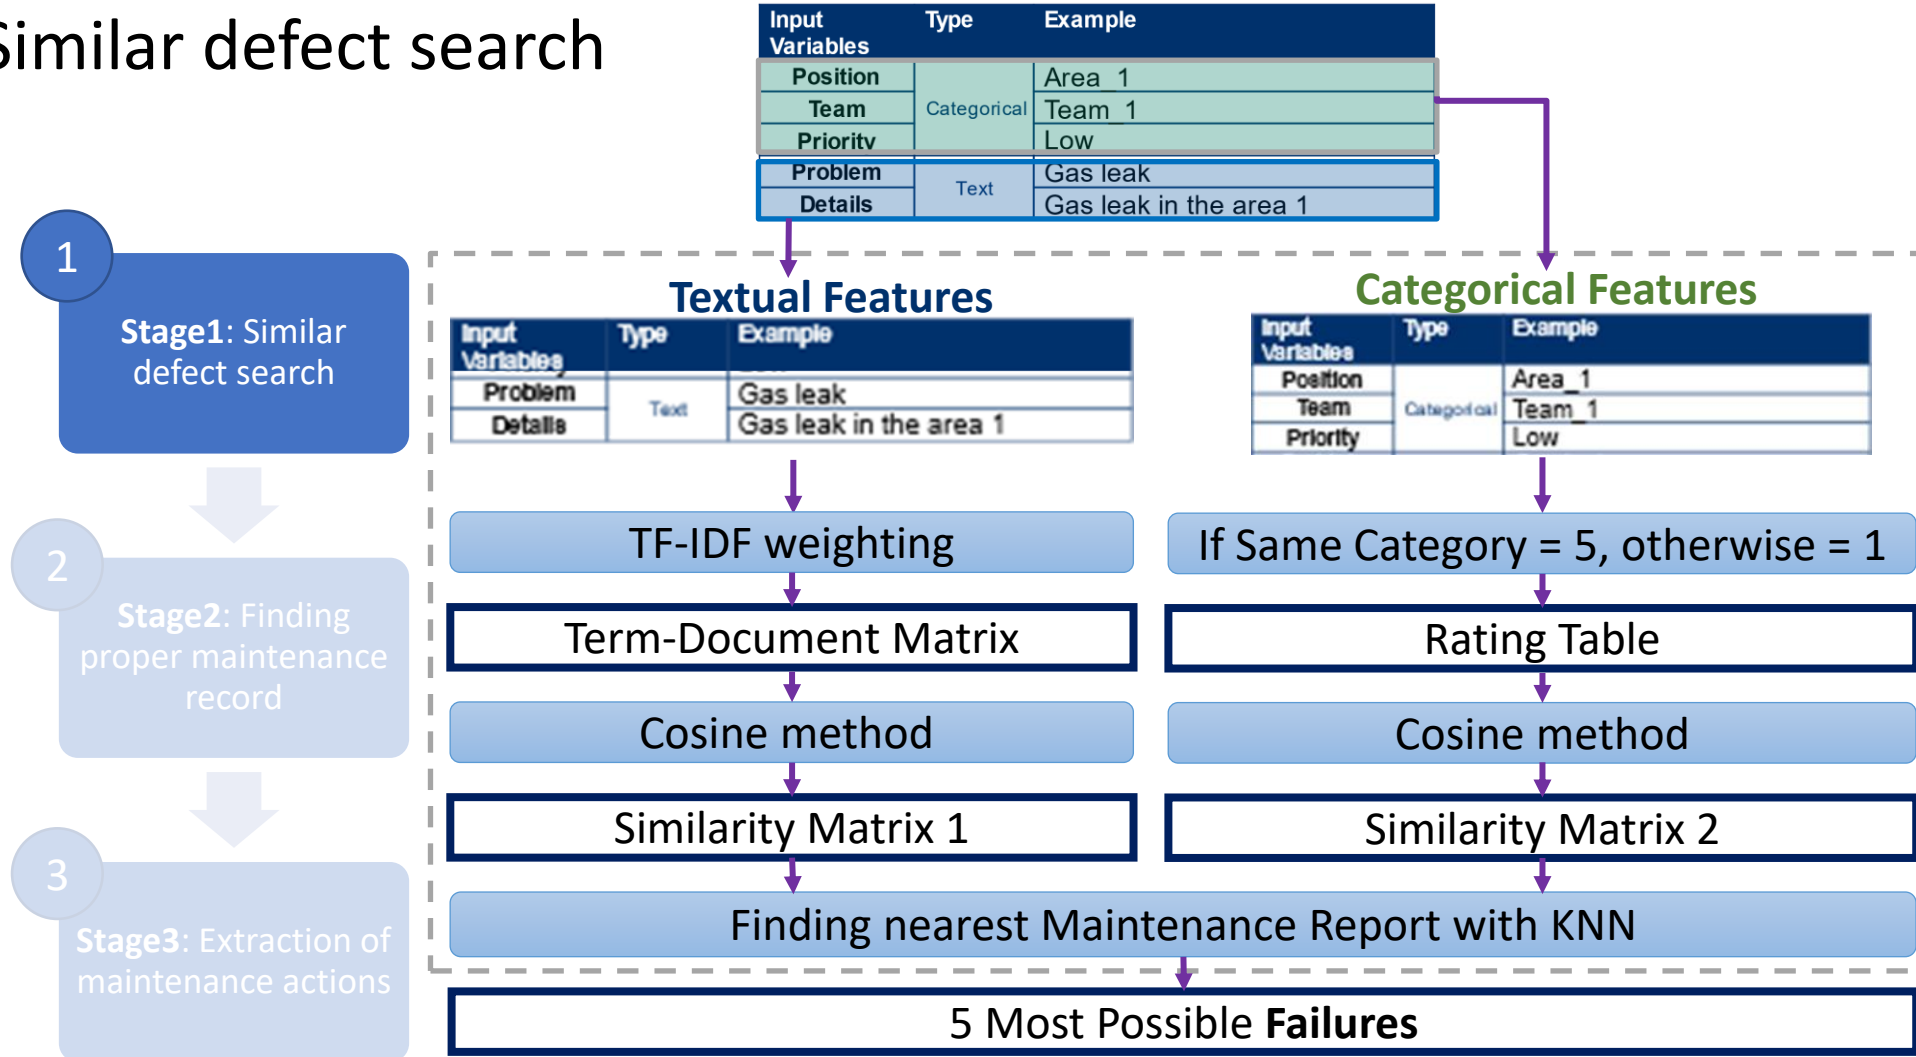

Construct the full maintenance report for the given defect.

# Mechanism (2/4)

## Similar defect search

- 1. Introduction
- **2. Technology**
- Data Structure
- **Mechanism**
- 3. Evaluation
- 4. Conclusion
- 5. Q&A

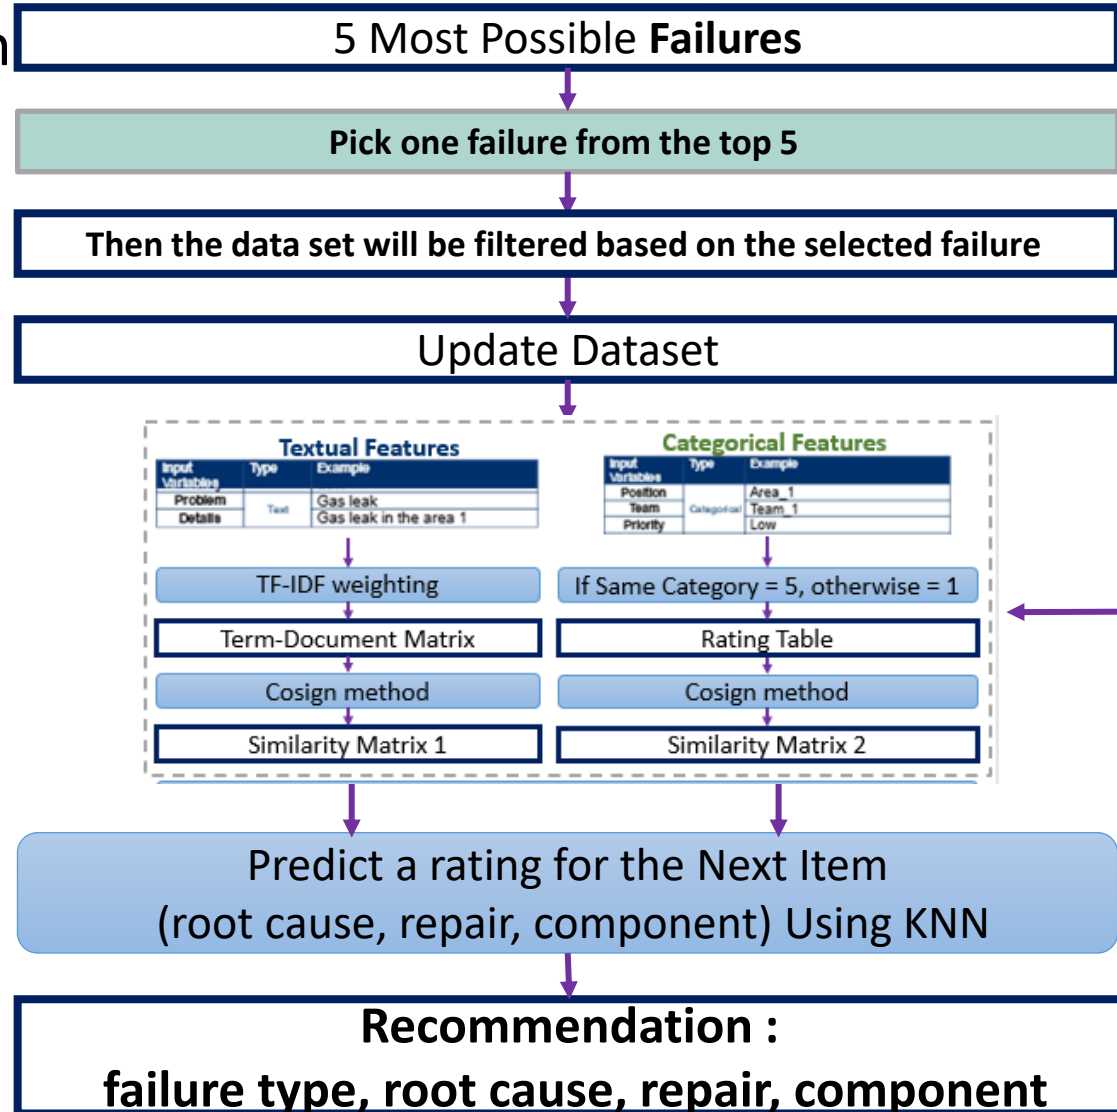

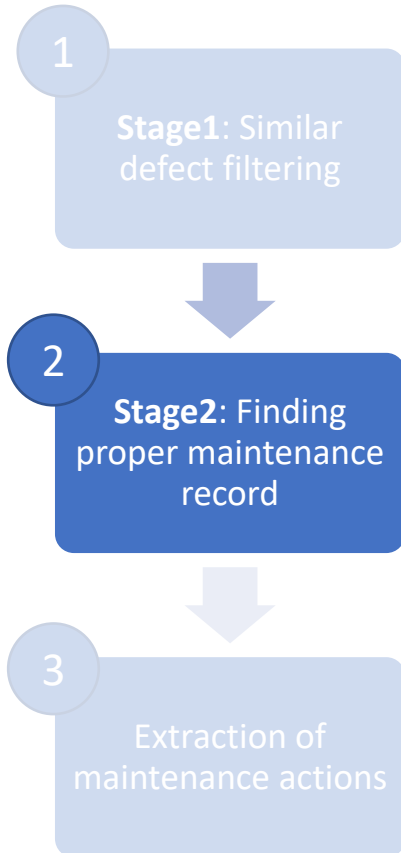

# Mechanism (3/4)

- 1. Introduction
- **2. Technology**
- Data Structure
- Mechanism
- 3. Evaluation
- 4. Conclusion
- 5. Q&A

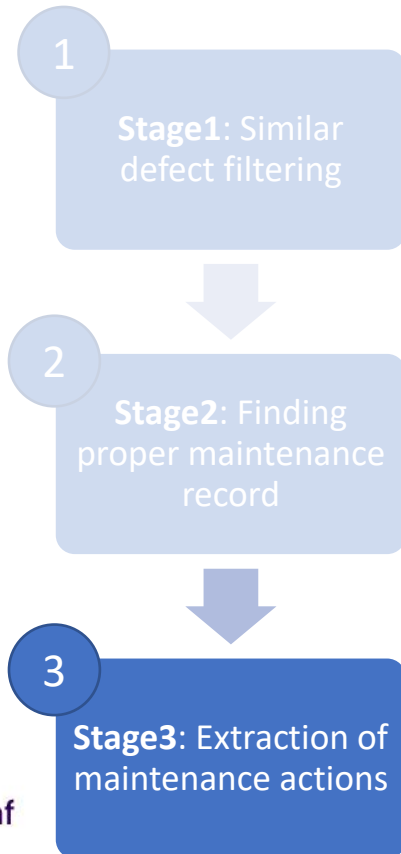

Finding similar maintenance records

# Mechanism (4/4)

- 1. Introduction
- **2. Technology**
- Data Structure
- **Mechanism**
- 3. Evaluation
- 4. Conclusion
- 5. Q&A

Finding similar maintenance records

**Recommendation :**  
failure type, root cause, repair, component

Pick one of the recommended maintenance action

Filter the dataset based on recommended maintenance actions to identify the remaining maintenance actions

**Filtered Maintenance Record**

Estimate number of operators & number of hours

Estimate the list of necessary preparation

**Recommended Output**

**Top 5 Maintenance Actions**

# Evaluation (1/4) : Evaluation Overview

- 1.Introduction
- 2. Technology
- **3. Evaluation**
- **Evaluation Overview**
- Evaluation Method
- Result
- Evaluation with Customer
- 4. Conclusion
- 5. Q&A

Test param.	Description
Data	Past maintenance history (defect and repair action information). Both of scheduled and unscheduled maintenance history.
Testing Criteria	Split the data into 90% (22500 points) for training and 10% (2500 points) for testing.
Evaluation Scenario	<ul style="list-style-type: none"><li>▪ Finding the proper maintenance actions against one of the defects in the test set .</li><li>▪ To evaluate the model, we collected the top 5 recommended maintenance actions for each defect in the test set.</li><li>▪ We compare the recommended actions with actual actions for the defect with considering the output data type.</li></ul>

# Evaluation (2/4) : Evaluation Metrics

Accuracy, Mean Squared Error (MSE), Root Mean Squared Error (RMSE), Mean Absolute Error (MAE).

- 1. Introduction
- 2. Technology
- **3. Evaluation**
- Evaluation Overview
- **Evaluation Metrics**
- Result
- Evaluation with Customer
- 4. Conclusion
- 5. Q&A

## Numeric Output

Number of operators & number of hours

5 Recommended maintenance actions

## Categorical Output

list of necessary preparation

Mean squared error

$$MSE = \frac{1}{n} \sum_{t=1}^n e_t^2$$

Root mean squared error

$$RMSE = \sqrt{\frac{1}{n} \sum_{t=1}^n e_t^2}$$

Mean absolute error

$$MAE = \frac{1}{n} \sum_{t=1}^n |e_t|$$

$$accuracy = \frac{correct}{correct + incorrect}$$

## Evaluation (3/4) : Results

The system is promising as it achieves an accuracy of **72.95%**

- 1.Introduction
- 2. Technology
- **3. Evaluation**
- Evaluation Overview
- Evaluation Metrics
- **Result**
- Evaluation with Customer
- 4. Conclusion
- 5. Q&A

Output Features	Accuracy	MSE	RMSE	MAE
Failure	77.91	-	-	-
Root Cause	57.70	-	-	-
Repair	74.02	-	-	-
Component	59.19	-	-	-
Total Accuracy (for the previous output)	67.21	-	-	-
Necessary preparation list	95.94	-	-	-
<b>Total Accuracy</b>	<b>72.95</b>	-	-	-
Number of hours	-	5125.93	70.14	23.15
Number of operators	-	107.91	10.22	3.71

This result can be improved by considering the customer KPI or Feedback to enhance the quality of the recommendation.

# Evaluation (4/4) : Evaluation with Customer

- 1.Introduction
- 2. Technology
- **3. Evaluation**
- Evaluation Overview
- Evaluation Metrics
- Result
- **Evaluation with Customer**
- 4. Conclusion
- 5. Q&A

- We have developed a prototype application for the maintenance recommender system to be evaluated with customer real maintenance data.
- The proposed prototype is an online application that reads the defects reports from the CMMS system.
- In addition, the system can be tuned automatically by comparing the recommendations with the actual maintenance report taken later.

Evaluation param.	Descriptions
Evaluation period	TBA
Use case	Daily patrol and its maintenance actions
Scenario	On daily basis, experts from maintenance team will use the system to find recommendations for the new defects being appended to the CMMS. Then, the experts will select the most appropriate recommendation and compare it with the appropriate maintenance action.
Status	System integration (w/ CMMS) was completed.

# Conclusion

- 1. Introduction
- 2. Technology
- 3. Evaluation
- **4. Conclusion**
- 5. Q&A

- Plant Recommender system analysis the new defect and suggests possible maintenance action, with referring past maintenance report.
- In this work, we proposed Multi-Stage recommender system to recommend proper maintenance action for a given defect.
- The system is promising as it achieves accuracy of 72.95%.
- Systems achieve promising results which leads to:
  - Re-work avoidance
  - Shorten planning time
  - Effective knowledge transfer
- For Future work:
  - We will improve the recommendation quality by considering the customer KPI to enhance the following recommendation and design it as close loop system.
  - We will improve the recommendation accuracy by using the customer knowledge in the current evaluation.
  - We will include more advanced machine learning techniques to improve the recommender system
